Cleaning Instructions Regarding Concerns About COVID-19 (Coronavirus)

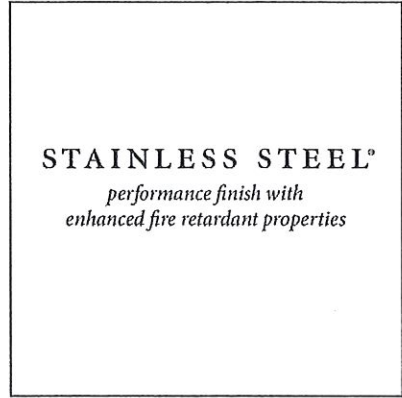

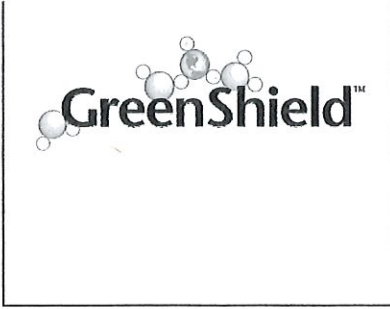

Many of you have been contacting us regarding cleaning instructions of our fabrics to help prevent the spread of coronavirus. All of our fabric is bleach cleanable with a 3% solution of bleach and water, as recommended by the CDC*. This equates to 1/3 cup of bleach to one gallon of water. It is always recommended that one test an inconspicuous area prior to treating the entire piece. All cleaning should allow for a 10-minute maximum sit time and then **MUST BE PROMPTLY AND PROPERLY RINSED**. Please note that bleach is highly corrosive to stainless steel.

**This cleaning recommendation is supplied without warranty. Absecon Mills neither guarantees, nor will be responsible for specific results as testing of these products was conducted under laboratory conditions and results may vary under actual conditions. Any misuse of cleaning agents may void Absecon Mill's Warranty and Performance Guarantee.*

Performance Finishes

Even those who have a good handle on fabric specifications can be stymied when it comes to fabric finishes! Which finish has what properties? Can a finish be fire retardant and stain resistant at the same time? What is a "Green" finish? The answers to these questions and many more await you in this newsletter, as we attempt to demystify fabric finishes, or click on each box below for more detailed information.
